

EBENEZER ENGINEERING
CONSULTING

Let's build our mark

ABOUT US

Ebenezer Engineering Consulting (EEC) is a multidisciplinary consulting firm established in the Federation of St. Kitts and Nevis in 2024. We bring together a team of experienced professionals with expertise across structural engineering, architecture, mechanical, electrical, and plumbing systems, hydraulics, hydrology, civil engineering, project coordination, and technical documentation. Our multidisciplinary foundation allows us to support a wide range of building and infrastructure projects with integrated, practical solutions.

EEC provides professional services from concept development through technical coordination, design support, construction documentation, approvals, and implementation support. We work across residential, commercial, institutional, hospitality, industrial, and infrastructure sectors, focusing on coordinated design, buildability, technical quality, and responsiveness to Caribbean project conditions.

For projects such as commercial and institutional facilities, EEC's value lies in the ability to coordinate architectural intent with structural systems, MEP services, site infrastructure, and project delivery requirements. We aim to help clients move from concept to implementation through disciplined coordination, professional communication, and practical engineering support.
